

Risk Assessment

What Procedure is being assessed?

The transportation of a mega box container using mechanical aid.

What training is required to complete the procedure?

- In house training certificate of the mechanical aid being used.
 - Knowledge of what is being transported.
-

What risks are there to the general Public?

- The public getting knocked, by being in the way.

What risks are there to you?

What risk is there to work colleagues?

- Work colleague may get hit by you working.
- Lack of communication may cause accidents.

Are there any other risks?

- Reduced visibility by the load may make transporting dangerous.
-

How can the risks be reduced?

General Public:

- Always use a banks man when working in congested area's to keep the public clear of all movements made.
- All visible aids on the mechanical aid will be in good working order and used to the full effect.
- Always make sure extended legs are used when using a fork lift truck to transport the mega box about. This increases load security.
- Carry the load as close to the ground as possible.

You:

Work colleagues:

- Always make everyone aware what has to be done and how it will be tackled. Discus on site risk assessments to make everyone aware of the dangers and how they can be reduced.

Other Risks:

- Always plan your route, and have a colleague direct you over tricky surfaces.
-

Has the risk been reduced enough? YES/NO

YES
